

Quick Installation Process

Enable full, customizable email security in just 5 quick steps

Introduction

SonicWall Email Security has a 5-step quick installation process which enables many organizations to be operational in under one hour, while the Comprehensive Anti-Spam Service is enabled with one click and takes as little as 10 minutes to configure.

Five-step installation for SonicWall Email Security

Organizations can use the built-in Quick Install process to configure a SonicWall Email Security system to get up and running once the system is properly licensed. Quick Install consists of the following steps:

- **Network Setup** — the IP address of SonicWall Email Security and the Email Server.
- **LDAP Set-up** — the IP address and admin credentials for the LDAP server.
- **Mode** — Whether to turn on the system or run it in pass-through mode for testing.

- **Junk Boxes** — Turn on the use of junk boxes using the default settings.
- **Connectivity** — Test connectivity to the SonicWall servers.

When flexibility is required

The default settings used in SonicWall Email Security provide many customers with the perfect level of spam, phishing and virus protection as well as improved end user satisfaction and minimal administrator management. However, every organization is different and while many solutions require you to change to fit their settings, SonicWall Email Security lets you tailor the system to fit your needs. Below are just a few of the many features that can be activated and adjusted to ensure SonicWall Email Security fits into your organization.

- Activate IP Reputation message rejection.
- Activate BATV protection to reduce NDR/backscatter spam.

Activating the Comprehensive Anti-Spam Service takes one click and only minutes to configure.

- Activate DHA and DoS protection.
- Increase/Decrease spam blocking aggressiveness settings.
- Allow users to access and use their personal settings for spam blocking aggressiveness, allow/block lists and more.
- Add inbound or outbound policies for users, groups or everyone.

...and much more

Comprehensive Anti-Spam Service

For SonicWall firewall customers, activating the Comprehensive Anti-Spam Service takes one click and only minutes to configure. This service can be used stand-alone or in combination with SonicWall Email Security.

SonicWall Hosted Email Security

SonicWall Hosted Email Security offers small- to medium-sized businesses (SMBs) superior cloud- based protection from spam, phishing attacks and malware, while minimizing deployment, administration and bandwidth expenses.

SonicWall Hosted Email Security can be activated, provisioned and setup in few simple steps.

Step 1: If you have already purchased the service and have a key, click here to activate the service and provision your instance.

Step 2: Adding your MX-record -After activating your Hosted Email Security service, you will receive a message to replace your current MX records settings. Follow the steps provided in the email to make this change.

Step 3: Setup and configuration

- Configure system monitoring — Configure Email address of the administrator who receives emergency alerts and IP of backup SMTP server(s)
- Network Setup — Configure domains and the destination Email Server(s) IP.
- LDAP Set-up — Configure IP address and admin credentials for the LDAP server(s).
- Junk Boxes — Turn on the use of junk boxes using the default settings.
- Verify — Go to external email like Gmail or yahoo and send an email and confirm disposition by checking the email in the audit interface.
