

BANK SPEEDS TRANSACTIONS WITH SONICWALL

McHenry Savings Bank enhances customer services with SonicWall WXA

Business need

The bank began to experience fluctuating latency on its Internet connections. This impacted one of MSB's core financial applications running at a remote data center.

Solution

The bank deployed a SonicWall WAN Acceleration (WXA) appliance and NSA Series firewall at its headquarters, and TZ Series firewalls at its branches.

Results

SonicWall WXA eliminated the bank's problem with latency fluctuation and dramatically improved performance. "SonicWALL has optimized my network for labor savings because it is so easy to manage over a single interface," says Nash. Now, we are able to run a total virtualized environment." By eliminating the need to reinstall T1 connections, the solution saves the bank \$24,000 a year. "That is a huge cost savings for us."

Benefits

- Significantly greater performance
- Low cost of ownership
- Ease of deployment
