

JWD INFOLOGISTICS GAINS SECURITY, COMPLIANCE AND CONTROL WITH SONICWALL

Large logistics provider increases network and data protection to guard against advanced threats and meet regulatory requirements.

JWD InfoLogistics Public Company Ltd. (JWD) was founded in 1979 as a provider of specialized logistics solutions, including home and office relocation, property development, and document storage services. Over the years, the company has evolved into a provider of total logistics and supply chain solutions, including cargo warehousing, storage, transport, and distribution and logistics software development, and has expanded to offer its expertise throughout the Association of Southeast Asian Nations (ASEAN).

Business need

As an established organization registered in the Stock Exchange of Thailand (SET), JWD wanted to ensure its security infrastructure, particularly its network and data, was secured and compliant with SET's regulations. The company wasn't happy with the performance it was getting from the open-source software firewall they had previously deployed as an internet gateway security solution, and it was looking for something that delivered greater visibility and control.

Solution

JWD's decision to replace its former software-based firewall with a more robust solution set off an evaluation process involving several Next-Generation Firewall vendors. JWD ultimately decided that SonicWall was best positioned to meet its critical security performance and reliability needs. To protect its HQ and branch office networks, JWD deployed NSa 3650 and NSa 2650 appliances, along with Advanced Gateway Security Suite (AGSS) and Global Management System (GMS).

Results

JWD has deployed SonicWall NSa Series NGFWs at their HQ and 13 branches to date. By configuring the solution in wire made, the company is able to achieve full-function threat prevention with SonicWall Capture ATP. And with the help of SonicWall GMS, JWD now enjoys simplified and centralized management that consolidates visibility, reporting and analytics while at the same time allowing the company to keep its existing routing infrastructure.

Benefits

- Multi-core hardware architecture for powerful performance
- Cutting-edge security, including on-box and cloud-based threat prevention
- Easy deployment, setup and ongoing management
- Network control flexibility with application intelligence and control
- Unified security governance, compliance and risk management
- Coherent, auditable approach to security orchestration, forensics, analytics and reporting
