

Midmac Contracting Builds a Better Network Security Solution with SonicWall

Construction company expands mobile workforce, enhances security, and establishes widespread VPN connectivity

Business need

The company recently found itself needing to expand its work-from-home capacity as well as meet a number of new security objectives. In addition, there was a need to establish VPN connectivity with 16 remote offices/ networks and utilize cloud services to ease network security management

Solution

MIDMAC's previous solution had consisted of three different network security appliances. But the company decided to switch to SonicWall based on its reputation for outstanding support services, its hardware specifications, and its appliance capabilities and features. The company deployed several SonicWall NSa Series next-generation firewalls (NGFW), along with SonicWave and SonicPoint access points.

Results

Based on the hardware's high specifications and the effectiveness of SonicWall's feature set, MIDMAC has found the setup to be both secure and robust. "Our experience with SonicWall has been exceptional," MIDMAC Sr. Systems Engineer Manuel Boghossian said, specifically praising SonicWall's enterprise-level products, robust hardware, cloud-based management platform, and extraordinary support service.

"SonicWall is the leader in network security hardware. Their solutions protect the infrastructure from sophisticated threats and are the most developed when it comes to integration with cloud services," Boghossian continued. "In short, it's an enterprise-level, multi-purpose firewall with an easy management console and a powerful cloud-based management platform."

Benefits

- Secure mobile work capabilities
- Protection from advanced threats
- Simplified, cloud-based management
- Strong hardware portfolio
