

MISSION DELIVERS VETERAN SERVICES VIA SECURE WIRELESS NETWORK

Orange County Rescue Mission assists hundreds in need with a SonicWall secure wireless network

Business need

Orange County Rescue Mission needed to secure a wireless network in a 250,000-square-foot site for more than 1,000 volunteers providing services for homeless veterans during a four-day event.

Solution

The mission deployed SonicWall NSA Series next-gen firewalls with SonicPoint wireless access points, along with SonicWall WXA and GMS, to rapidly establish a secure, easily managed and high-performance wireless network. "An Aruba solution would not have had the full-featured security we needed for the various virtual SSIDs we were able to deploy with the SonicPoints," says James Carter, CTO.

Results

"The SonicPoints gave us the tools we needed in our tool belt," says Carter. "The signal strength was almost double what we expected. It saved the day for us. With the assistance of SonicWall, we helped nearly 600 people during the event and 29,000 people over the year."

Benefits

- Rapid deployment
- Easy centralized management
- Accelerated performance
- Over 200 concurrent Wi-Fi users
