RANSOMWARE CRITICALLY IMPACTS REAL-WORLD BUSINESSES

EXPLORE THE IMMEDIATE NEED FOR NEXT-GENERATION FIREWALLS PAIRED WITH THE MULTI-ENGINE SONICWALL CAPTURE ADVANCED THREAT PROTECTION (ATP) SANDBOX.

Capture ATP sandbox is powered by multiple engines to mitigate the most evasive malware, including costly ransomware attacks.

Sandboxing quickly examines files to stop malware and ransomware — before they enter your network.

SonicWall Real-Time Deep Memory Inspection™ stops zero-day attacks, malicious PDFs and Microsoft Office files, and even chip-based Spectre, Meltdown and Foreshadow exploits.

Capture ATP with RTDMI™ discovered more than 12,300 never-before-seen attack variants so far in 2018.

SonicWall next-generation firewall earned ‘Recommended’ rating in 2018 NSS Labs Group Test.
