/*
 * jQuery Highlight plugin
 *
 * Based on highlight v3 by Johann Burkard
 *
http://johannburkard.de/blog/programming/javascript/highlight-javascript-text-higlighting-jquery-plugin.html
 *
 * Code a little bit refactored and cleaned (in my humble opinion).
 * Most important changes:
 * - has an option to highlight only entire words (wordsOnly - false by default),
 * - has an option to be case sensitive (caseSensitive - false by default)
 * - highlight element tag and class names can be specified in options
 *
 * Usage:
 * // wrap every occurrence of text 'lorem' in content
 * // with <span class='highlight'> (default options)
 * $('#content').highlight('lorem');
 *
 * // search for and highlight more terms at once
 * // so you can save some time on traversing DOM
 * $('#content').highlight(['lorem', 'ipsum']);
 * $('#content').highlight('lorem ipsum');
 *
 * // search only for entire word 'lorem'
 * $('#content').highlight('lorem', { wordsOnly: true });
 *
 * // don't ignore case during search of term 'lorem'
 * $('#content').highlight('lorem', { caseSensitive: true });
 *
 * // wrap every occurrence of term 'ipsum' in content
 * // with <em class='important'>
 * $('#content').highlight('ipsum', { element: 'em', className: 'important' });
 *
 * // remove default highlight
 * $('#content').unhighlight();
 *
 * // remove custom highlight
 * $('#content').unhighlight({ element: 'em', className: 'important' });
