

## AlSCO Italia Streamlines Its Security with SonicWall

### Business Need

AlSCO Italia is a distinguished leader in Italy's workwear and linen rental services sector. With nearly a thousand employees, AlSCO Italia operates at the forefront of innovation and reliability. The business sought to upgrade its network security infrastructure to address evolving threats, streamline management processes and achieve ease of management via centralized consoles across its extensive network. The outdated infrastructure and lacking granular control and support necessitated a modern solution to meet evolving security challenges.

### Solution

With the help of their trusted SonicWall partner, System Service, AlSCO Italia adopted SonicWall's cutting-edge network security solutions, deploying 22 SonicWall NSa 3700 units (11 in High Availability) and one Secure Mobile Access (SMA 8200V) for 130 users. This transition involved replacing a competitor firewall and Windows Server VPN by leveraging SonicWall's intuitive management interface and robust security features. This strategic upgrade included the installation of the new infrastructure in parallel with the old system. The transition was seamlessly completed during a weekend, ensuring minimal disruption to operations.

### Results

The implementation of SonicWall solutions brought significant improvements to AlSCO Italia's network infrastructure. With centralized management and enhanced security measures, the organization experienced streamlined operations and increased reliability. Moreover, the intuitive interface provided greater control over network configurations, boosting overall efficiency and productivity.

### Benefits

- Enhanced control over infrastructure
- Increased confidence in service reliability
- Streamlined operations through device consolidation

### Solutions at a glance

- [SonicWall NSa Series](#)
- [SonicWall SMA Series](#)

*"We are fully satisfied with SonicWall products. Implementations are intuitive, immediate, and simply work when needed."*
