

AWFIS SPACE SOLUTIONS ENSURES CONNECTIVITY, SECURITY & UPTIME WITH SONICWALL

Coworking space/virtual office provider's new cybersecurity solution protects against advanced threats and offers greater visibility and control.

AWFIS Space Solutions is a provider of coworking space and virtual offices, with 63 locations in 9 cities in India. The company currently hosts more than 1,500 companies and over 25,000 members. As the company continued to grow, it became increasingly important for AWFIS to deploy gateway security at all of its centers. But connectivity was also a concern: The company needed to ensure that all AWFIS employees and resident company users at its centers could securely and seamlessly connect to its city's head office and other sites.

Business need

While AWFIS Space Solutions considered solutions from several companies, they chose SonicWall, who was able to tailor a solution that met each of their cybersecurity and connectivity requirements.

To do so, the company deployed SonicWall NSa 5600 NGFW in High Availability configuration at each of its city head office locations.

Then NSa 3600, NSa 2600, and/or NSa 2650 NGFWs were installed at their branch locations, along with a few SonicWall TZ series appliances. To help with centralized management and monitoring, SonicWall also recommended GMS.

Results

With the new SonicWall solution in place, AWFIS could offer its resident companies greater protection and better performance. Connectivity between sites was greatly increased, and with the addition of application visibility and control, IT admins were able to gain valuable insight into both the network and its users. And because of SonicWall's emphasis on disruptive economics, AWFIS was able to implement High Availability at a lower TCO, helping ensure maximum uptime.

Benefits

- Security and performance assurance to customers
- Insight into the network with application visibility and control
- Greater connectivity between sites
- High Availability with lower TCO

Solutions at a glance
