

BOUNDLESS CYBERSECURITY FOR DOCTORS, PATIENTS AND STAFF

The demands on IT security and data protection systems in a medical practice are specific and complex. In addition to the issues of network security and stability, as well as defense against external attacks and unknown threats, the protection of patient data must be guaranteed at the highest level. Using the "Boundless Cybersecurity" approach, SonicWall and SonicWall's partner company, tbs Computer-Systeme GmbH, have created the perfect solution for a cardiology practice in Munich – including a reliable and secure answer to the issues of home office working.

Business Need

A stable system was required, that would enable centralized management in combination with the specific security and data protection requirements of working with sensitive patient data. In addition, the IT system had to ensure a reliable and robust solution for on-site network and home office working, as well as secure wifi for patients and guests.

Solution

The TZ370 firewall provides the practice with security for its network and data, acting as a shield against attacks, malware and ransomware. Two SonicWave access points provide secure access to the network, while the comprehensive Advanced Service Package ensures that the entire system receives continuous maintenance and is always up-to-date.

Results

The solution enables the practice to seamlessly integrate employees working from home and external offices into the network. It also guarantees a stable and secure connection to the internet, which is essential for the practice's business - whether for its management system, its telematics infrastructure or the exchange of laboratory data.

Benefits

- Stable VPN connections and site network
- Reliable data protection for patient data
- Simple, secure connection of external work-stations
- Secure W-LAN for patients and guests

Solutions at a glance

- TZ370
- SonicWave
- All services incl. Gateway Anti-Virus and Anti-Spyware
- Content Filter Service
- DPI-SSL
- Capture ATP

"We only have good things to say, the VPN connections are stable and we've had no security incidents so far. We're very happy with the solution. The IT guidelines of Germany's National Association of Statutory Health Insurance Physicians used to give us sleepless nights, but now we're well prepared."
