

MSSP BLOCKS EMAIL-BORNE ZERO-DAY MALWARE

Managed security service provider Secure Designs, Inc., drives “Value Innovation” with SonicWall Email Security and Capture ATP

Business need

“43% of SMBs do not have a website, and 23% have no social media presence. Whether it is customer or supplier communication, our small business clients depend heavily on email to operate and grow. Unfortunately, SMBs often lack the training that helps their employees recognize potential phishing attempts, and that makes them more vulnerable to all sorts of malware. A single click resulting in ransomware can put them out of business.”

Solution

“Our mission at Secure Designs is to protect small businesses and organizations, to give them the utmost in protection at the most affordable price,” says Erich. “That’s why we are huge fans of SonicWall’s Email Security with Capture ATP cloud service. It is the latest offering in our ongoing Value Innovation service to our customers.”

Results

“We see Capture ATP for email security as the perfect solution to the SMB-email vulnerability,” says Erich. “It offers the comprehensive protection that is desperately needed in the SMB sector, and integrates easily with Office 365. We have installed it on our entire direct customer base, and have seen the difference it makes. Within an hour of being installed, it saved one customer from an Emotet infostealer malware variant. SonicWall has been extremely effective with meeting each evolving threat through the multi-engine sandboxing in Capture ATP. We can’t say enough good things about Capture ATP and Email Security. It has dramatically enhanced our ability to perform our mission.”

Benefits

- Stops ransomware and zero-day threats from reaching your inbox
- Drives “Value Innovation” for security service providers
- Delivers enterprise-level security for the SMB sector
- Lowers overhead costs with ease of deployment and maintenance
