SONICWALL®

COLLEGE GAINS COMPREHENSIVE AND AFFORDABLE NETWORK SECURITY

McHenry County College supports its students and faculty with greater network security capabilities

Business need

When establishing a redundant disaster recovery backup at its business training center, which is nine miles from the main campus, the college sought a comprehensive yet affordable network security solution. Even at its backup site, cyberattacks and malicious code are growing concerns for the college, as students are often tempted to download illegal software or code, and there is often the threat of viruses.

Solution

The college deployed SonicWall NSA Series firewalls at its disaster recovery site as the cornerstone of the site's total network security solution, rather than use the technology it had previously enlisted at the main campus.

Results

The college increased protection against computer viruses and malware attacks. "We wanted to improve network security, and we found that SonicWall had the malware protection we needed, and it was economical," says Dr. Allen Butler, Chief Information Officer, McHenry County College.

Benefits

- Comprehensive network security
- Economical cost of ownership

Solutions at a glance

- SonicWall NSA Series

"SonicWall had the malware protection we needed, and it was economical."
