

Assessment Technology Company Strengthens Security and Control Over its 800 Global Centers with SonicWall's Future-Ready Solutions

Eduquity thwarts cyber threats and malpractices while improving network operations

Business need

Eduquity Career Technologies is a pioneer assessment organization focused on conducting high-stakes examinations in a computer-based mode. The company offers assessment suites and examination management services to corporations, educational institutions, government agencies and more. Its examination centers are located across 800 locations worldwide.

The company had been getting reports of malpractice during examinations, which exposed the lack of effective security in the centers. Eduquity urgently needed an affordable solution to safeguard its end-to-end assessment operations. The security system needed to be quickly deployable at both the data center and local networks and allow centralized and granular controls to prevent future transgressions.

“So far SonicWall has helped in attaining the objective of improved security and reduced maintenance overhead. We are very much satisfied and happy we chose SonicWall as our security partner.”

Ramesh Kumar
Chief Technology Officer, Eduquity

Solution

After evaluating the security appliance market for a high-performing firewall, Eduquity chose SonicWall's NSa series in high availability (HA) mode for its data center. Eduquity wanted to take advantage of the NGFW's powerful and massively scalable multi-core architecture, real-time deep packet inspection technology, automated security capabilities and simplified implementation process.

To ensure cost-effective integrated security management with high-speed cyberattack prevention at its examination centers, Eduquity decided to implement the TZ series. The TZ series firewall provided flexible yet integrated secured connectivity with the NSa at the data center along with automated, real-time threat detection and blockage. Eduquity's IT team was able to easily deploy the firewalls across all the sites in a very short time using the zero-touch deployment feature and SonicWall's Network Security Manager (NSM).

Results

Eduquity realized significant cost savings owed to the SonicWall NGFW's ease of deployment. Post-implementation, the IT team could efficiently manage all the examination centers through a centralized console, thereby eliminating the scope of malpractices. The enhanced security enabled the company to reduce operational costs too.

Benefits

- High-performance security
- Zero-touch deployment
- Centralized security controls
- Real-time threat prevention
- High-performance security
