

Elzendaalcollege Increases Security Effectiveness With Sonicwall

Elzendaalcollege ensures the security of its networks and addresses advanced threats thanks to SonicWall technology.

Founded in 1949, Elzendaalcollege is a Catholic secondary school located in Boxmeer and Gennepe. Both Gennepe and Boxmeer offer pre-vocational secondary education (VMBO) and in Boxmeer there is also senior general secondary education (HAVO) and pre-university education (VWO). In Gennepe, students can follow the first three years of HAVO and VWO.

Business Need

Education has been one of the main targets for cybercriminals since 2020 due to the pandemic crisis and because of that, academic institutions have been forced to innovate faster than ever. Elzendaalcollege needed to deploy a high-performance security solution for its two locations to address advanced threats and secure their internal network with advanced protection.

Solution

ACTV8 Networks is a SonicWall partner in The Netherlands who addressed Elzendaalcollege's business needs. Since 2009, ACTV8 Networks in Uden has been a full-service IT service provider, relieving a large number of organizations with smart, secure and reliable IT solutions. Whether it concerns consultancy and advice or the complete management of IT environments, they always focus on what is the best solution for their customer needs.

Elzendaalcollege chose SonicWall's easy-to-manage, reliable and cost-effective solutions and they have now deployed SonicWall Network Security appliances (NSa) 5650 and 4650 that secure communication and protect against the day-to-day incursions as well as against advanced threats. They have multiple segments in their network with a segmentation for students and a different one for teachers and administration. Access and VPN for external companies and IOT (Internet of Things) such as heat controlling, or webcams are running in a separate network.

Thanks to Sonicwall's technology, Elzendaalcollege has been able to increase their security effectiveness at a low operational cost and protect their networks easily.

Benefits

- Network security
- High performance
- Covers all the needs of the centers
- Very easy to deploy and low-cost equipment

Solutions at a glance

- [SonicWall NSa 5650 HA](#)
- [SonicWall NSa 4650 HA](#)

"Elzendaalcollege was looking for a high-performance solution that could cover all the needs of both sites and SonicWall appliances provide a high level of perimeter security, as well as very easy to deploy and low-cost equipment. It was the best solution to go for."
