Pioneering Non-Profit Organization Fortifies Wireless Network with SonicWall's Next-Gen Firewall

Fei Yue secures its multiple access points from advanced threats through centralized security management

Business Need

Fei Yue Community Services, a renowned social service organization in Singapore, is a not-for-profit voluntary welfare organization that's committed to serving the needy and vulnerable in our community. Fei Yue Family Service Centre was established in 1991, and Fei Yue Community Services was established in 1996. They are one of the pioneers in counseling services. The organization has more than 700 employees.

Fei Yue had always used firewalls without unified threat management (UTM) capabilities. While the non-UTM firewalls provide basic network security functionalities these have limitations in terms of visibility, scalability, security features and manageability. Fei Yue recently decided to replace its non-UTM firewall with a security solution addressing all these vulnerabilities.

Solution

Fei Yue chose SonicWall's cybersecurity solutions after analyzing a variety of options in the market. It decided on SonicWall for its all-encompassing UTM firewall features. The firewall could address advanced threats, centralize security management and offered single-pane-of-glass administration.

The IT team decided to deploy SonicWall's WiFi Planner, a feature of the SonicWall Wireless Network Manager, to design the wireless network. The WiFi Planner gave them the intuitive, easy-to-use flexibility to automatically design and deploy access points. The entire deployment process was zero-touch. SonicWall's Network Security Manager (NSM) helped manage the firewall operations centrally.

Results

The WiFi Planner helped Fei Yue optimize wireless coverage with the fewest possible access points, which helped lower the total cost of ownership. SonicWall's wireless security network enabled them to enjoy stable wireless access points. The centralized panel and tools were easy to use and helpful in controlling network operations. NSM also ensured granular security monitoring against advanced threats. Fei Yue found the UTM solution to work smoothly, providing a healthy and stable network environment.

Benefits

- High-performance security
- Minimized downtime
- Easy administration
