

"Our company employees had to use two separate VPN connections to access AWS and local application servers. Thanks to SonicWall, with its integrated AWS support, we can now easily achieve both by using a single VPN connection."

Gamegos Uplevels Its Security Posture with SonicWall

Turkish casual gaming company ensures remote employee security, eases connecting with AWS, and protects against advanced threats — all without compromising simplicity.

Business Need

In the years since its founding in 2006, mobile game developer Gamegos has achieved exceptional success, first with social media games such as Cafeland, Marketland and Fishland, and today with mobile free-to-play games like Manor Café and Cafeland-World Kitchen. As the company has grown, it's faced an increasing need to protect its servers against external threats. And as the number of employees have grown, so has the need to safely offer greater remote work flexibility. But while improving security posture is important to Gamegos, the company didn't want to do so at the expense of management simplicity.

Solution

After some research, Gamegos decided to team up with SonicWall to address its various security needs. For increased threat protection without the complexity, the company chose SonicWall NSa Series Next-Generation Firewall appliances. And to ensure that employees working outside the office were safely connected, Gamegos deployed SonicWall SSL VPN.

Results

Since the installation of the new SonicWall architecture, Gamegos has reported feeling more secured against external threats. In addition, remote employees are having a much easier time connecting from outside the office — and the new solutions have also made it easier to connect with AWS (Amazon Web Services), which Gamegos uses extensively, without the need for additional hardware or software. In fact, the new SonicWall products are working so well that Gamegos is now evaluating SonicWave Access Points to further uplevel its security posture. "Everything has been good so far!" Ahmet Dirican, Gamegos IT specialist, said.

Benefits

- Greater protection against external threats
- Ability to connect to AWS without additional tools
- Increased security for remote workers
- Ease of management
- Half the TCO of the competition for the same level of firewall security
