

Kingdom Services Group Reaps Rewards from Switching to SonicWall

SonicWall helped Kingdom Services Group boost security performance, slash expenses and cut service demand with NSa Series NGFWs, Capture Client and NSM.

Business Need

Kingdom Services Group is a versatile and dynamic company that operates in various sectors, such as recruitment, security, cleaning, healthcare and more. With a workforce of around 7,000 employees and a wealth of sensitive data, the company needs a strong and reliable cybersecurity solution. Kingdom Services Group were not satisfied with its old and outdated competitor solution and wanted to upgrade to a modern and cutting-edge solution that enhanced its endpoint security and overall protection and gave the company more control and autonomy. The company also wanted a solution that could fight against sophisticated threats, simplify administration and lower overhead costs.

Solution

Kingdom Services Group and SonicWall worked together to find a solution that best fit the organization's needs, and, in the end, they decided on the NSa 4700. The group also seamlessly and remotely installed SonicWall Capture Client on all of its devices using a handy Remote Monitoring and Managing (RMM) tool. The organization first tested the firewalls alongside its previous solution and then confidently switched to SonicWall exclusively after fine-tuning its configuration. The group then completed the security upgrade by rolling out DPI-SSL gradually across its entire network.

Results

Kingdom Services Group has enjoyed a boost in its security performance thanks to SonicWall's solutions' superior threat detection and prevention features. The improved security performance has also led to fewer service calls due to proactive security measures. All of this, along with the simplified security management and automation, has resulted in lower operational costs. The group now handles its security in-house, which means changes to the configuration can be done quickly and efficiently using SonicWall's Network Security Manager (NSM). The IT Director for Kingdom Services Group, Steve Jackson, said, "Since installation, we have had no issues with the firewalls and capture client endpoints – a very positive experience!"

Benefits

- Slashed costs
- Boosted security efficiency
- Self-managed security
- Lowered service call frequency

Solutions at a glance

- NSa Series
- Capture Client
- NSM

"Our improved security performance coupled with simplified security management has reduced costs and time spent on administrative tasks. The whole process has been a very positive experience!"
