

Leading Media House Fortifies its IT Infrastructure with SonicWall's Advanced Solutions

Malayala Manorama upgrades its cybersecurity appliance and migrates to highly advanced and reliable network security.

Business need

Malayala Manorama is a renowned media house in Kerala, India. Beginning its journey as only a Malayalam language newspaper, in the past 133 years the company has transformed into a multimedia giant with channels in English, Hindi and Malayalam. Its repertoire is comprised of magazines, television channels, radio, news websites and an OTT platform.

Malayala Manorama's continued expansion led to an escalating demand for a larger data center infrastructure. The increasing data center capacities necessitated scalable cyber protection. As a result, the company decided to upgrade its existing firewall with a more advanced cybersecurity solution to prevent any malicious and unauthorized web/application activities.

Solution

Malayala Manorama has already experienced the superior quality of SonicWall's SuperMassive appliances. The media giant turned to SonicWall again for scaling its security inside and outside its private network. The company's IT team opted for migration to the new NSsp device in High Availability mode for its zero-touch deployment and easy import of settings from the earlier SonicWall installation.

Results

SonicWall's solutions have allowed the company to improve its throughputs, extend its connections, and enhance overall performance. The IT team also appreciated the solutions' ease of management, which saved them a lot of effort during the migration process. Overall, the approach enabled Malayala Manorama to secure its private network, allowing employees to function seamlessly in their daily operations.

Benefits

- Highly available security
- Prevented malicious activity
- Enhanced network productivity
- Ease of migration
- Maximum uptime
