SONICWALL®

MEDICAL EDUCATION CENTER MANAGES MOBILE SECURITY WITH SONICWALL

Ross Education gives remote users secure connectivity to data and streamlines management of multiple appliances

Business need

Ross Education needed secure mobile access for an expanding distributed organization. "I wanted to have something that was as secure as possible and yet still allow our staff to get into the network to do their jobs effectively," says Greg Brenner, CIO.

Solution

Brenner evaluated solutions from Fortinet and WatchGuard before choosing to deploy SonicWall Secure Mobile Access (SMA), NSA Series firewalls and SonicPoint wireless access points, managed with Global Management System (GMS). "SonicWall offered us full visibility from endpoint to endpoint, as well as reporting on utilization, errors or attempted attacks," says Brenner.

Results

"If a smartphone is lost or stolen, I don't have to worry about mobile data leakage." says Ross. "GMS oversees everything, so it saves quite a bit of administrative time. It gives us that true enterprise level of control and deployment options that other vendors out there just don't have."

Benefits

- Visibility and ease of management
- Broad mobile device platform
- Wireless network security

Solutions at a glance

- SonicWall GMS Series
- SonicWall SMA Series
- SonicWall NSA Series
- SonicWall SonicPoint Series

"GMS provides detailed reporting on our access point activity. We can manage all of our access points remotely."
