

Miray Cruises Sails to Superb Security with SonicWall

Miray Cruises feels that it is now completely secure after deploying SonicWall Gen 7 NSa NGFWs on its cruise ships.

Business Need

Miray Cruises is a premier international cruise line offering stunning tours of the Greek Islands in the Mediterranean Sea. The business wasn't getting its needs met by its previous security solution, so it began to look at other options. With over 300 employees and many customers on its cruise ships, Miray Cruises needed security that was user-friendly, had 24/7 support and was easy to manage.

Solution

After consulting with a SonicWall partner, Miray Cruises decided to deploy SonicWall Gen 7 NSa 3700 and 4700 next-generation firewalls (NGFW) on its cruise ships. The cruise line felt that the SonicWall solutions would meet its needs regarding user-friendliness, ease of management, 24/7 support and strong security.

Results

Miray Cruises uses all of the features available with its Gen 7 NSa Series NGFWs including Capture Advanced Threat Protection (ATP), Content Filtering Services (CFS), Gateway Anti-Virus, Geo-IP Filtering, Botnet Filtering and more. By using SonicWall solutions, the cruise line feels it has completely secured its business. Network problems are detected before they make it to the end user, decreasing the intensity of any issues. Miray Cruises' IT Director Hakan Demir said, "SonicWall is really user-friendly. I can get support for these products whenever I want."

Benefits

- 24/7 support
