SONICWALL®

MONTE CARLO FASHIONS LTD. UPSCALES PERFORMANCE AND PROTECTION WITH SONICWALL

Large fashion garmenting and retail company centralizes management and improves connectivity across its distributed environment.

Business need

Monte Carlo Fashions Ltd. was experiencing network security and reliability issues with their existing software-based firewall solutions. These problems were compounded by the growing, recurring cost of MPLS, as well as problems with managing and reporting user issues and firewall policies across their locations.

Solution

Monte Carlo deployed an NSA 3650 NGFW appliance at their headquarters and multiple NSA and TZ appliances with AGSS services at their branch offices. At SonicWall's suggestion, Monte Carlo put to use the SD-WAN functionality within NGFW to reduce dependence on MPLS. At the same time, GMS software was deployed to create a centralized management center for all NGFW appliances and enable reporting for each and every appliance from a single location.

To help Monte Carlo continue to work toward their desired level of security in phases, SonicWall also created and shared a Security Roadmap for the company's network infrastructure.

Results

Monte Carlo's use of SD-WAN functionality has improved application uptime, security and connectivity between locations. The company is enjoying increased efficiency from simplifying and centralizing management and reporting, as well as increased security that defends against advanced threats, zero-day attacks and unknown threats at the gateway level.

Benefits

- Reliably protects against advanced threats at the gateway level
- Provides bandwidth management, ISP Failover and load balancing for multiple ISPs
- Centralizes management and reporting for distributed environments
- Improves site-to-site connectivity performance

Solutions at a glance

- SonicWall NSA Series
- SonicWall TZ Series
- SonicWall GMS Series

"We selected SonicWall as our firewall brand because of its robustness, ease of use, next-generation features and, above all, its threat prevention engine, which represents an industry first by detecting and blocking both malware and vulnerability exploits in a single pass."
