

OUR KIDS GAINS 30% IN NETWORK UTILIZATION WITH SONICWALL

By deploying next-gen firewall with secure remote access and wireless, Our Kids added WLAN and application control with no overhead.

Business need

Our Kids sought to ensure appropriate levels of access to confidential data for remote workers “Our real challenge was to safely and securely provide the right level of access to the right person,” says Patricia Smith, CIO. “Not only did we want to introduce more mobile technology, but we wanted to make it much easier for case workers who work remotely.”

Solution

The organization deployed SonicWall Network Security Appliance (NSA) next-generation firewalls, Secure Mobile Access (SMA) appliance, and SonicPoint access points. “SonicWall gives us a secure platform for future innovation, by letting our users connect using their own devices, while letting us offer new solutions at the same time,” says Smith.

Results

Our Kids gained increased remote access with no added overhead, WLAN capabilities and application intelligence, control and visualization. “Where SonicWall really stands out is in separating traffic at the application as well as the network level. SonicWall lets us use Facebook to stay in touch with chronic runaways, while blocking the use of Facebook games for staff,” says Jeff Koonce, IT Infrastructure Manager.

Benefits

- Robust secure mobile access
- No additional overhead
