

# P-Parking Secures Its Parking Station Networks with SonicWall Firewalls

SonicWall Firewalls enable P-Parking to lower security overheads, improve threat protection throughput and ease the deployment experience for its IT teams.

## Business need

P-Parking International is a leading car parking service and technology provider in Singapore. A subsidiary of Space Value Holdings Co., Japan, the organization provides innovative car parking solutions like fully electronic parking systems, video parking guidance systems, tailgating detection and web-based vehicle management systems.

P-Parking leverages IPsec and VPN tunneling to facilitate stable and secure communication between systems deployed at their parking stations and their HQ data center. The data transferred includes account records and information associated with payment processes. P-Parking was looking for alternatives to entry-level firewalls from Gartner MQ Leader brands while managing cost efficiencies.

## Solution

P-Parking turned to SonicWall for its firewall requirements as SonicWall could demonstrate excellent security effectiveness, high performance and simplicity in managing the solution without a high level of skills required. Other factors that favored SonicWall was their competitive pricing, satisfactory pre-sales and post-sales support and reliable stock availability. The organization decided to deploy NSa and TZ Series firewalls to protect their parking system environments from network threats.

The P-Parking team was able to deploy the firewalls at the parking stations in the shortest span of time through provisions of automated policies and preconfigured settings using SonicWall's latest generation OS capabilities. This helped P-Parking seamlessly migrate with minimal operational disruption.

## Results

Post-deployment, with SonicWall firewall solutions, P-Parking has lowered its cybersecurity overhead, while enjoying improved threat protection throughput and security capabilities.

As the firewalls had to be deployed at every parking station, the ease of deployment brought a marked improvement in the overall operational efficiency.

SonicWall firewall solutions now enable the organization to ensure reliable and stable connections between their parking stations and HQ data center, offering future-ready security capabilities.

## Benefits

- Low-touch firewall deployment
- Minimal administrative overheads
- Cost savings over previous solution
- Improved threat protection throughput

## Solutions at a glance

- SonicWall NSa series
- SonicWall TZ series

*"SonicWall provides comprehensive bundling at low costs, and offers very good pre-sales and post-sales support."*
