SONICWALL®

# PAYLOCITY SCALES RAPID GROWTH WITH SONICWALL

**Software company gains manageable security with increased throughput and uptime.**

## Business need

"We needed an easily-managed, highly available firewall that could give us in-depth security, remote access, support our 10Gb connectivity needs and scale to accommodate our growing infrastructure," says Brian Boos, IT Manager.

## Solution

The company deployed NSA appliances in high availability (HA) mode at headquarters, DR and remote branch offices, all connected over site-to-site VPN. They also deployed SonicPoint wireless access points at each location.

## Results

"The 10Gb interfaces of the NSA E8510 gives us full return on our bandwidth investment. It future-proofs our infrastructure as we continue to grow," says Boos. "Our users have enjoyed better bandwidth and stayed connected much more consistently. Also, our connectivity at remote sites is up and running faster."

## Benefits

- Next-Generation Firewall protection
- 10Gb interfaces
- Self-configuring wireless access points
- Ease-of-management through a single interface
- Ease-of-deployment

## Solutions at a glance

- SonicWall NSA Series
- SonicWall SonicPoint wireless access points

"We can use these devices confidently for years ahead."
