

South African Spice Producers Strengthen Security with SonicWall

Following a ransomware attack that resulted in financial losses to the company, Natpro Spicenet leveled up its cybersecurity with SonicWall TZ Series NGFWs and Capture ATP.

Business Need

Natpro Spicenet has been proudly producing spices and dry food goods in South Africa since 1989. The organization manages its entire supply chain from procuring raw materials to production and distribution. The spice producers previously had no firewall in place opting to use an endpoint anti-virus as a main line of defense. A ransomware attack that resulted in intercepted emails, financial losses and slowed internal processes convinced the business to begin looking at options for strengthening its cybersecurity. The spice company needed cost-effective, advanced cybersecurity to protect critical systems and data. The organization viewed SonicWall as a reliable and secure option in the constantly expanding cyber threat environment.

Solution

Natpro Spicenet elected to deploy a SonicWall TZ370 next-generation firewall (NGFW) at its head office with SonicWall Capture Advanced Threat Protection (ATP) and Network Security Manager (NSM). It's also begun rolling out SonicWall TZ270 NGFWs to all of its stores to ensure the stores are connecting back to the head office through VPN tunnels.

Results

The SonicWall solutions have helped Natpro Spicenet gain exclusive threat intelligence to safeguard it against the constantly expanding cyber threat landscape. The company stated that the system is easy to manage and SonicWall provides great technical support while being transparent to end users and requiring minimal administrator configuration. General Manager Peppi Dowd stated, "Overall, it's reliable and effective. It helps secure the network and critical data."

"Overall, it is reliable and effective. It helps secure the network and critical data."
