Turkish City Boosts Cyber Resilience with SonicWall

Çatalca Belediyesi left an ineffective competitor solution behind to benefit from the lowered cost, ease of management and reliability of SonicWall's NS*a* and TZ Series next-generation firewalls.

Business Need

Nestled between the Marmara Sea and the Black Sea, Çatalca Belediyesi is a charming municipality in Turkey. The Çatalca region attracts vacationers from all over with its scenic forests and hiking trails. Çatalca Belediyesi was using a competitor solution but felt that the prices for devices and licensing fees were too high. The competitor solution had also recently disclosed some concerning vulnerabilities and the city felt it was time to move on from what it considered to be an ineffective and hard-to-manage product. The city needed a solution that could eliminate never seen before advanced threats, centralize and streamline security management, and reduce overall costs.

Solution

After consulting with SonicWall's partner ITPort, Çatalca Belediyesi requested a demo where the city saw SonicWall's multi-engine sandbox and Capture Advanced Threat Protection (ATP) eliminate many security vulnerabilities. The city also saw that the management interface for the SonicWall solution was easier and more simplified compared to competitor products. Çatalca Belediyesi decided to deploy SonicWall NS*a* Series and TZ Series next-generation firewalls to better meet its needs.

Results

Çatalca Belediyesi has seen lowered TCO after switching to SonicWall and is happy that the licensing for the High Availability devices is included for free of charge both installation and renewal period with the 1 license for 2 device. When the city's projects and locations expanded, it was impressed by the fact that all of the devices could be easily managed from the cloud thanks to SonicWall's Network Security Manager (NSM). Çatalca Belediyesi is also pleased with the easy access to support it receives with SonicWall. They are providing the necessary training also from the SonicWall University.

Benefits

- Budget-friendly
- Simplified management
- Greater security efficacy
- Reliable and accessible support

Solutions at a glance

- SonicWall NS*a* Series
- SonicWall TZ Series
- SonicWall Capture ATP
- SonicWall NSM

"We were relieved that the SonicWall team was easily accessible and quick solutions were produced."
