

Amasya Şeker Fabrikası A.Ş. Improves Security Architecture with SonicWall

Turkish sugar producer lowers its TCO, improves security and receives better support by switching to SonicWall.

Business Need

Since its founding in 1954, Amasya Şeker Fabrikası A.Ş. has been in the business of creating sugar and sugar by-products such as molasses, crystal sugars and more. As the company grew, so did its cybersecurity needs. As time went on, Amasya Şeker Fabrikası A.Ş. was finding that it wasn't getting the support that it needed from its previous competitor solution, so it began looking into upgrading its security architecture.

Solution

After looking into a number of solutions, Amasya Şeker Fabrikası A.Ş. met with a SonicWall partner. Once the company determined that SonicWall would be a good fit for its needs, it decided, based on suggestions from the partner, to deploy NSa Series and SOHO Series next-generation firewalls and a wide range of security services including SSL VPN/IPSec VPN, Capture Advanced Threat Protection (ATP) with Real-Time Deep Memory Inspection (RTDMI™) and Content Filtering Services (CFS).

Results

Amasya Şeker Fabrikası A.Ş. is very pleased with the ease of management, specifically with regards to the reporting and management interfaces. The company improved its security, decreased its response times and saved money by switching to SonicWall. Taner Arslan, who is an information systems specialist at Amasya Şeker Fabrikası A.Ş., said, "SonicWall saved us time and money. They provided us with better security and traceability. It's a beautiful, stable product."

Benefits
