SONICWALL®

WHEN BETTER PROTECTION ENABLES GREATER CARE

Ballesol delivers fast, secure WiFi access throughout its care homes for the elderly, enabling doctors and staff to spend 20 per cent more time with residents.

Business need

Ballesol needed to deploy a firewall solution to protect the WiFi networks at its centres for the elderly across Spain.

Solution

The company, working with SonicWall partner THK Soluciones, rolled out SonicWall firewalls and WiFi access points across all its centres, and adopted the SonicWall management and reporting solution.

Results

Today, the WiFi networks at Ballesol centres are faster and more secure. Staff and doctors, who visit residents regularly, have noticed the changes. Everyone using the centres' public networks are pleased with its improved performance. What's more, they can go online safe in the knowledge that their devices are protected. Staff are also working more productively with the enhanced WiFi network. Because the IT team can prioritise applications, employees are assured of good access to business-critical applications.

Benefits

- Staff spend 20 per cent more time with residents through better mobile access to data
- Residents and their visitors enjoy fast WiFi access throughout the centres
- Employees are more productive with higher levels of satisfaction
- IT administrators spend 10 per cent less time on routine management

Solutions at a glance

- Next Generation Firewalls
- Management & Reporting

"Medical staff at Ballesol spend around 20 per cent more time with patients because mobile access to data is so good with our SonicWall solution. When doctors visit residents' bedsides they can access all the data they need on their mobile devices."
