Capture Security Center Unified Insights

Accelerate time-to-insights at speed and scale

The Capture Security Center Unified Insights is built around the sole purpose of helping business and security leaders and their security operation teams find the correct answers to tough security questions quickly so that they can run a security-first organization.

It lets them do a lot of things right, such as: Maintaining a robust security posture, staying ahead of potential threats and risks, securing company assets, keeping users safe, establishing effective security policies and protocols, fixing security and performance problems fast, and correcting operational issues proactively.

## HIGHLIGHTS

Business Benefits

- Validate security posture
- Aid in cyber-defense planning and budgeting
- Fulfill applicable regulatory obligations

Operational Benefits

- Monitor firewall, wireless and endpoint analytics in one place
- Keep a pulse on users, devices, and networks health metrics
- Calibrate and enhance security controls
- Maintain network health and performance
- Stay on top of all web and application activities

Security Benefits

- Analyze indicators, gather evidence and perform timely defensive actions
- Triage and zero in on critical alerts that matter most before harm occurs
- Actively survey signs of potential risks, threats, and abnormal activities
- Know what data assets and devices are under attack and at-risk
- Spot and fix network or performance issues fast
- See potential risks and anomalies for early intervention
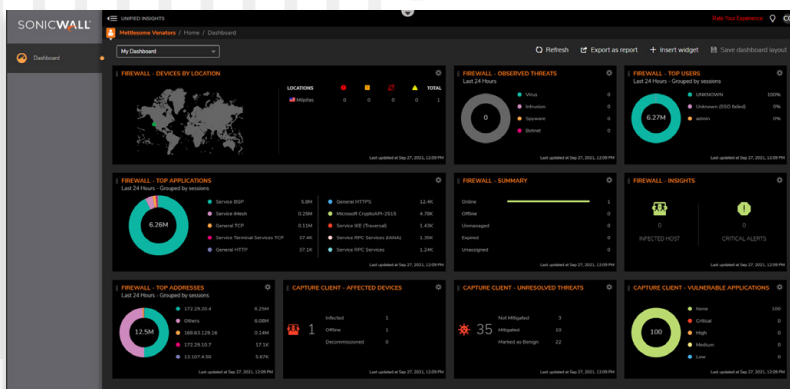

Decrease risk by responding faster to security events:

DATASHEET

However, many organizations still struggle to achieve their objectives when operating under poor conditions where there are too many data silos, causing data overload and analysis paralysis to an already overwhelmed team. Thus, finding out which devices are down or infected, where attacks are coming from, the types of threats and their volume and frequency, and how many applications are risky becomes a constant source of risks and frustration. This situation leads to a dangerous situation where security stakeholders don't have the necessary visibility and the answers fast enough to do their jobs right.

Unified Insights

Unified Insights help solve these serious problems by putting the power of centralized security intelligence and global incident response back in the hands of security pros. Analytics from SonicWall firewall, wireless, and endpoint security products merge into one dashboard for central monitoring and troubleshooting. Unified Insights also accelerates time-to-insights at speed and scale, creating unprecedented user experience with intuitive

data visualization across large data volumes for complete security transparency and analytics applications around:

- Improving risk analyses for policy actions
- Exploring data-driven patterns and anomalies across devices, users and applications
- Answering questions about who, what, where and when
- Speeding IT decision-making for real-time risk containment and incident response

Build your custom tenant-specific dashboard in a few clicks

The dashboard is customizable for a tailored user experience. Users can pick from a wide range of pre-built widgets and arrange them in a personalized fashion that best suits their intended use on a per-tenant basis. They can use the filtered information to proactively observe risks and investigate repeating threats to see where attackers are coming from, who is targeted and at-risk, and what parts of the network are most vulnerable to attack.

Intuitive self-guided customization workflow
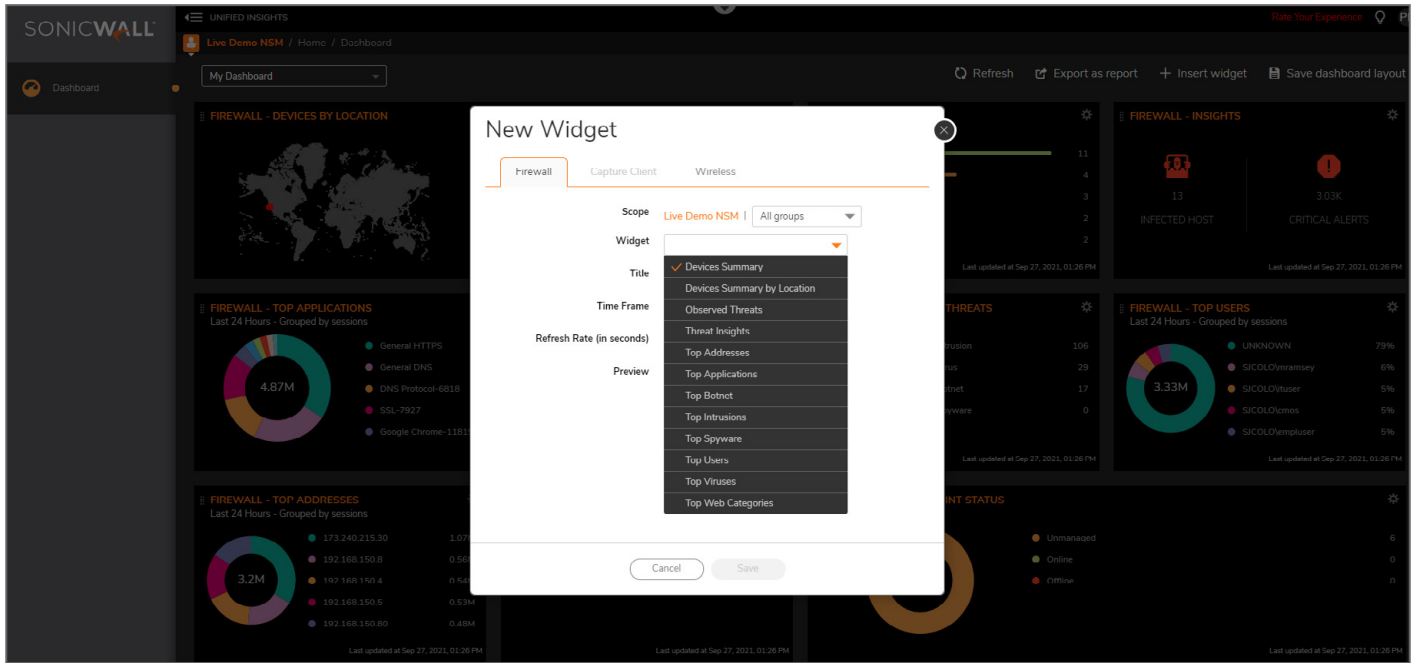

Tenant-specific dashboard

SONICWALL®

Single sign-on (SSO) context-aware drill down

With central visibility, users benefit from having a top-down understanding of the state of their security posture combined with the latitude to proactively explore and investigate laterally or drill deep into layers of analytics within their firewall, endpoint and wireless datasets. And based on those investigations and findings, analysts and responders can take corrective actions, tune security policies as needed, and fix whatever problems that come out in the discovery process.

Licensing

Unified Insights is a value-add service offered at no additional cost, so licensing is not required. The service is built into the SonicWall Capture Security Center single-pane-of-glass cloud management portal. It is automatically enabled and available to customers with tenants that have activated supported products.

Supported Products

- Any SonicWall firewall managed by SonicWall Network Security Manager (NSM) SaaS Essential

- Any access point and switch managed by SonicWall Wireless Network Manager (WNM)

- SonicWall Capture Client

Gain insights into your entire security ecosystem with Capture Security Center.
